PAINT A NEW PICTURE: YOUR LIFE IS WORTH IT!

Make A Wise Choice for You and Your Family Today!

It is The “NOW Trend” - “GOING GREEN”.

I am an Account Broker for a 23-year-old wholesale manufacturing company who has made it their MISSION to better the lives of all who will hear them concerning **Going Green** products, health, and services.

Here are a few things to consider:

Look on the back of your toothpaste and see if it reads: If swallowed, call the **Poison Control Center**. That’s the first reason to try OUR dental care, which dentists are recommending.

Visit the Institute for *Children’s Environmental Health* website!

Many people do not realize how many chemicals they are exposed to, and what those chemicals expose their children to - or how it’s ruining their health and our environment, which is the future of the next generation. If your child swallows ANY of our products and you call the Poison Control Center, they will tell you that it is okay, and to have the child drink lots of water, and that MAYBE an upset stomach will occur. That’s it!

Have you walked down the grocery store isle where the cleaning products are and smelled that nice aroma lately? That is GASES emitting into the environment!

Check your household labels! Contact us for a copy of an article written by the Mayo Clinic regarding Formaldehyde. Then check your labels. According to the Mayo Clinic report, 9 billion pounds of Formaldehyde alone is made each year IN THE U.S!

The result? May cause: cancer, birth defects, and genetic damage.

WILL cause: skin reactions, heart palpitations, headaches, depression, joint pain, chronic fatigue, chest pains, ear infections, dizziness, loss of sleep, aggravated coughs, colds and asthma!

And it is found in over 300 products in the home!

Do you use Chlorine Bleach? Chlorine bleach is the number one call on poison control each year for hospital emergencies! Chlorine Bleach mixed with other chemicals may become **EXPLOSIVE!** Ammonia, Aerosol Propellants, Phosphates, and worst of all, Formaldehyde—also known as Basic H, found in shampoo, conditioners, children’s products, powders, detergents, cleaning products, deodorant, air fresheners, floor wax, just to mention a few!

In summary:

Approximately **80,000 synthetic chemicals** are in use in the U.S marketplace, a great majority of which did not exist before the 1940’s. As many as **1,500 NEW** chemicals were being introduced annually at the time of these reports, and I believe it is even much higher today.

If you want to change your environment and save our rivers and streams from being polluted—or even if you want an extra monthly income to ease the stress of the economy, give me a call. This business is virtually recession proof since our products are products you currently purchase for everyday use. The rewards are great, with unlimited income potential.
